

DDL® Wall sleeves

Installation guide for

DDL wall sleeve PQZ (polymer-quartz-sand cement)

DDL wall sleeve KmS (besandetes Kunststoffrohr)

DDL steel wall sleeve (steel wall sleeve with anchor flange)

Install the wall sleeve with smooth internal surface flush within the shuttering during the structuring work (before pouring the concrete) according to the indications on the drawing and secure it against dislocation.

The purchaser of the DDL wall sleeves is responsible for its suitability for use and for all damages (immediate or consequential) resulting from improper installation.
